

GLASSFOREVER FEATURES:

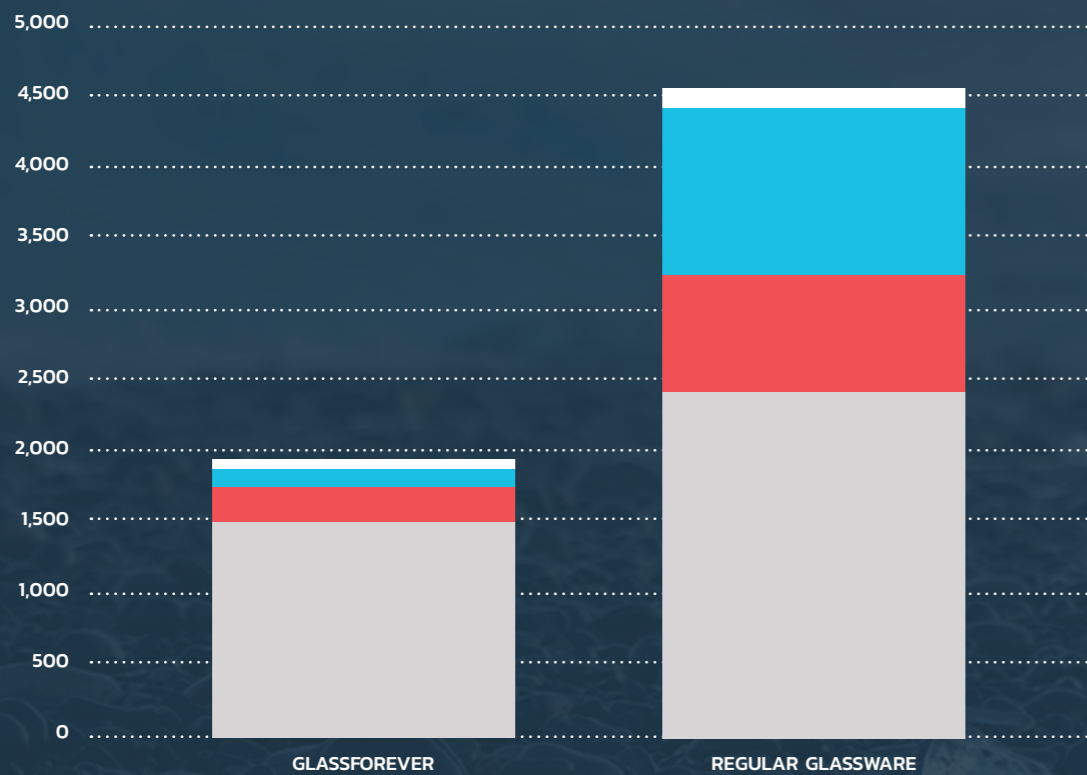

FOR THE ENVIRONMENT

Even though plastic causes so much damage to the environment, buying products from glassFORever is a green and climate-friendly investment. We recycle **100%** of our products, and we have created a recycling system that takes responsibility for the environment.

After use, our products are not discarded in the rubbish bin. Instead, we collect and transport them to our factory in Denmark, where we grind the used material and use it to produce new, recyclable and eco-friendly glassware. No waste. 100% recycled. This makes us feel proud.

You might also be surprised by our low CO₂ footprint?

100% RECYCLABLE

100% RECYCLING!

We buy back your old glasses. Then we grind them and make new glassware.

EXTRA DURABLE MATERIAL

GLASSFOREVER FEATURES:

STRENGTH PAYS

At glassFOREver, we manufacture drinking glasses. But not just ordinary drinking glasses.

Where ordinary glasses can break and leave broken glass shards which cause problems and are hazardous for people, our specially developed plastic glasses are 100% unbreakable, which ensures a high sense of security and safety.

The material is crystal clear and produced with a thick, solid base. The products have been tested by independent laboratories, and when we say that the glasses are unbreakable, then that's because they are. Products from glassFOREver cannot break.
